DIRECTIONS: The amount required to lower the pH depends on the water's natural buffering capacity. Introduce 1 to 2 quarts of ACID pH ADJUSTMENT directly to the pool at a point of strong agitation. Do not add directly to the skimmer or vacuum. Allow 15 to 20 minutes for thorough mixing, then retest the pH to see if it falls within acceptable limits (7.2 to 7.8). If the pH tests greater than 7.8, repeat application.
