Store locked up.

Dispose of contents/container to comply with local/regional/national/international regulations.

For industrial and commercial use only.

For additional information, see Safety Data Sheet.

WARNING:

This product contains, or may contain, trace quantities of a substance(s) known to the state of California to cause cancer and/or reproductive toxicity.

Ordinary detergents and water have little effect on the white, chalky residue left behind by ice melting chemicals. This residue, if not removed immediately, provides the ideal environment for the development of extensive rust and corrosion deposits. To make matters worse, continued cleaning with ordinary detergent-based cleaners produces an additional film that is even more difficult to remove. **SALT NEUTRALIZER** is an industrial strength rinsing compound developed specifically to cut through this dulling film without strenuous hand scrubbing. This remarkable product chemically dissolves salt residue without harming sensitive painted surfaces. Don't let ice melt residue shorten the life of your valuable equipment, rinse troublesome salt residue away with **SALT NEUTRALIZER**.

DIRECTIONS:

TO REMOVE SALT FILM FROM VEHICLES: Dilute six ounces of **SALT NEUTRALIZER** in a gallon of water. Spray onto vehicle surface, allow to set for several minutes and rinse with clean water. Clean vehicle with **TRUCK AND TRAILER WASH** or **CAR WASH AND WAX** for a sparkling clean appearance.

FOR ROUTINE USE ON FLOORS: Prepare a solution containing one ounce of **SALT NEUTRALIZER** for each gallon of rinse water. Apply liberally to floor with mop, allowing solution to set for several minutes. Pick up dissolved ice melt with a clear water rinse, being certain to wring out mop frequently.

NFPA® RATINGS:

Health: 2; Flammability: 1; Reactivity: 1
