WEST CHESTER GEAR

WEST CHESTER PROTECTIVE GEAR AT A GLANCE

West Chester Protective Gear delivers personal protection solutions that improve the performance and safety of workers on the job and at home. A market leader in both the retail and industrial markets, we develop and market high-performing gloves, welding apparel, workwear and rainwear.

One of the largest glove manufacturers in the Western hemisphere, West Chester Protective Gear is passionately committed to providing outstanding service, quality, innovation and value. Highly experienced sales and operations teams are knowledgeable and responsive, providing innovative solutions that fit customer needs.

Customers depend on West Chester Protective Gear as a trusted partner for branded, direct import and private label solutions. As a global provider offering vast experience and continuing innovation in product design, sourcing and logistics, West Chester consistently delivers the right products at the right value with guaranteed on-time delivery.

GLOVE PATTERNS

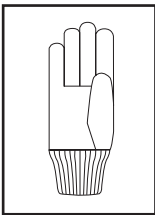

Clute Style

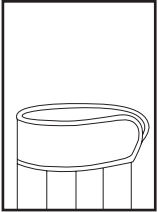

Reversible Style

Gunn Style

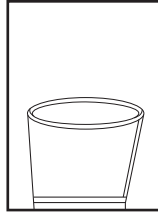

CUFF STYLES

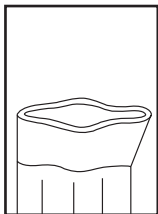

Safety Cuff

Is easy to remove in emergency situations and gives added protection to the upper wrist.

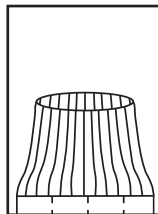

Gauuntlet Cuff

Has the same features as the safety cuff, but is longer to offer greater protection to the forearm.

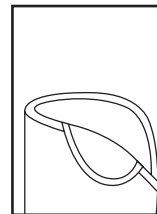

Band Top

Light wrist protection. Allows air to circulate around the hand.

Knit Wrist

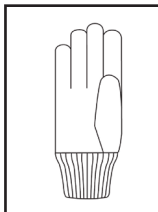

Used to prevent dirt and debris from getting inside the glove. Keeps cold air out and warmth in by fitting under clothing sleeves.

Slip On

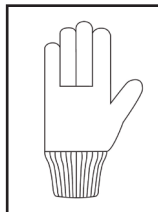

Has no cuff. Glove extends over cuff. Is easy to slip on and take off, and is used primarily in general purpose applications and on drivers gloves.

THUMB STYLES

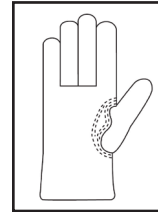

Straight Thumb

For closed-fisted work (gripping). The seams are out of the work surface during gripping activities.

Wing Thumb

For open-handed work (pushing, pulling). The seams are out of the work surface during open-handed activities.

Keystone Thumb

Use for same activities as wing thumb styles, but affords the strongest construction method. It is the most comfortable glove to wear.

COATED GLOVES

Coated gloves are top sellers because of their tactile sensitivity and form-fitting design. The coatings provide you with better grip and resistance to abrasion.

Coated gloves can be multi-purpose to protect your hands from dirt and a variety of workplace hazards. The ergonomic construction of the seamless string knit shells conforms better to the natural shape of the hand for greater flexibility and comfort. The shells are then dipped into coatings that enhance your grip in dry, wet, or oily environments.

COATINGS	Dry Grip	Wet Grip	Oil Grip	Abrasion	Tactility	Comfort	Permeability	Cost
INJECTION MOLDED	E	F	F	G	F	VG	L	\$\$
NITRILE								
MICROFOAM AIR Flexible, porous and tacky coating for better grip. Slow water permeation.	VG	E	VG	E	VG	E	H	\$\$\$
FOAM NITRILE Flexible, thin, porous coating. Fast water permeation for excellent grip. Draws liquid away from surface. Breathable.	E	E	VG	VG	E	VG	H	\$\$
SPONGE FOAM Porous, soft and flexible. Excellent resistance to snags, abrasions, oils and fuels. Acts like a sponge and delivers fair wet grip and good oil/dry grip. Breathable and comfortable for extended wear.	VG	G	VG	G	E	VG	H	\$\$
LUNAR FOAM Porous with excellent breathability and flexibility due to air pockets. Unique finish channels oil and liquids away from the surface of the glove to deliver very good dry grip and good wet/oil grip.	VG	E	VG	G	E	E	H	\$\$
FLAT NITRILE Smooth, non-porous coating which provides high chemical and abrasion resistance.	E	F	F	E	VG	VG	L	\$\$
POLYURETHANE								
Strong, durable, lightweight and breathable. Provides flexibility and high resistance to abrasion.	VG	G	G	VG	E	E	H	\$\$
LATEX								
SANDY / CRINKLE LATEX Highly elastic and flexible. Excellent dry grip and good wet grip. Highly durable and resistant to abrasion.	E	G	F	G	VG	VG	H	\$\$\$
FLAT LATEX Highly elastic and flexible. Excellent dry grip and good wet grip. Highly durable with mild vibration absorption.	E	F	F	E	VG	VG	L	\$\$
BI-POLYMER								
Combines the properties of different polymers to offer excellent wet and dry grip, and good oil grip. Good abrasion resistance, flexibility and dexterity.	E	VG	F	F	G	VG	H	\$\$

HOW TO CHOOSE YOUR COATING

Nitrile is a thinner coating that improves dexterity and tactility. Provides tough protection against petrochemicals, solvents, oils and greases. Excellent resistance from abrasion and snags. Available in a variety of types: foam, microfoam, lunar foam, sponge and flat.

Polyurethane is the thinnest coating available for excellent dexterity. Incredibly tough, yet flexible and comfortable. Very good dry and oil gripping abilities.

Latex is typically the thickest of all the coatings and therefore provides enhanced separation from hazard. Offers economical durability, very good abrasion and good grip in dry conditions.

Bi-Polymer is a durable and flexible coating for both dry and wet grip. Limited chemical and heat resistance.

WHAT DIFFERENTIATES SHELL FABRICS

STANDARD YARNS

FEATURES

Nylon

Synthetic, low lint, high tensile strength. Minimal shrinkage, more uniform than cotton. Excellent dexterity & tactile sensitivity. Highest abrasion among man-made fibers.

Polyester

Synthetic fiber for basic abrasion protection. Low moisture absorbency- resists shrinkage. Mainly used in seamless or blend.

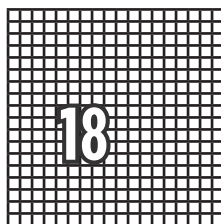

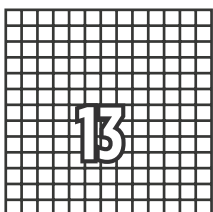

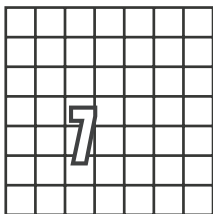

Acrylic/ Acrylic-Poly

Synthetic fiber helps insulate from cold temps. Dries quickly.

Cotton

Natural fiber that is most often spun into yarn or thread and used to make a soft, breathable textile. Provides minimal protection for light duty projects. Cotton linings offer comfort and heat dispersion.

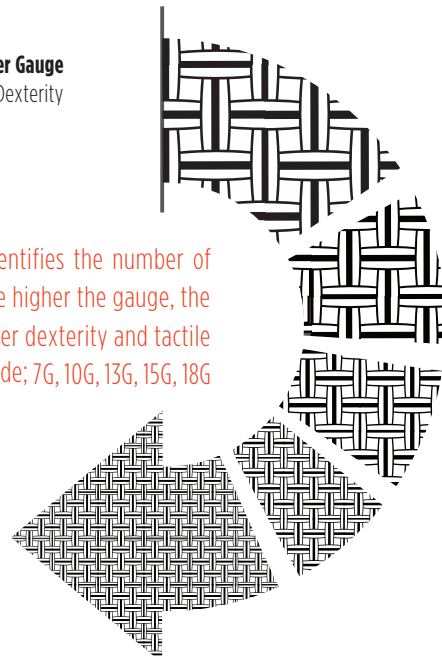

WHAT GAUGE MEANS

Lower Gauge
Looser Knit, Less Dexterity

The gauge of the shell identifies the number of stitches per linear inch. The higher the gauge, the tighter the fit and the better dexterity and tactile feel. Common gauges include; 7G, 10G, 13G, 15G, 18G

Higher Gauge
Lighter, Softer Feel

Our new and improved nitrile microfoam has larger air bubbles to improve both water and oil permeability, and even further enhance resistance to abrasion. The air bubbles draw oil and liquids away from the surface of whatever you're touching, so that you maintain excellent wet and dry grip. Our Microfoam Air Nitrile is more breathable than standard nitrile foam to keep your hands cool and comfortable.

TRADITIONAL MICROFOAM AIR

IMPROVED MICROFOAM AIR

NEXT GEN MICROFOAM AIR NITRILE

715SNFTFD | MICROFOAM AIR FULLY COATED DOTTED PALM

- Full hand coverage
- Dotted palm improves grip
- Outstanding resistance to abrasion

715WNFTFT | INSULATED MICROFOAM AIR WITH TOUCHSCREEN

- Touchscreen material is embedded in the coating, allowing for use on all fingers
- Better grip in both wet and oily conditions
- Acrylic brushed terry loop liner
- EN511: X2X

715SNFTK | MICROFOAM AIR 3/4 DIP

- 3/4 dip adds protection
- Better grip in both wet and oily conditions
- Outstanding resistance to abrasion

715SNFTKD | MICROFOAM AIR 3/4 DIP DOTTED PALM

- Dotted palm improves grip
- Outstanding resistance to abrasion
- Keeps hands cool and comfortable

HVY715YNF | HI-VIS MICROFOAM AIR ON HI-VIS SHELL

- Hi-vis for enhanced safety
- Outstanding resistance to abrasion
- Keep hands cool and comfortable

715SNFTP | MICROFOAM AIR PALM COATED

- Better grip in both wet and oily conditions
- Outstanding resistance to abrasion
- Keeps hands cool and comfortable

CUT RESISTANT GLOVES

AUTOMOTIVE
HVAC
MANUFACTURING
FABRICATION
PLUMBING
GLASS

HOW IS CUT-RESISTANCE MEASURED?

STANDARDS TO MEASURE CUT PERFORMANCE:

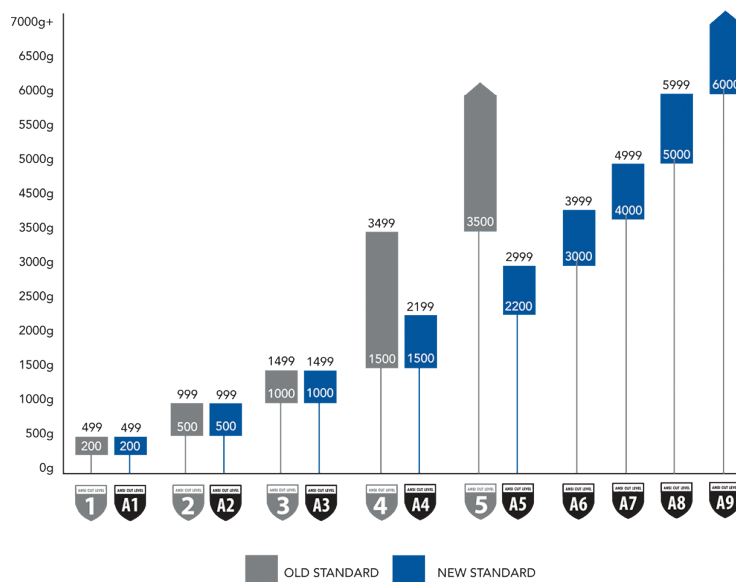

The ANSI 105 Standard for the U.S. and the European Standard EN 388. They are not interchangeable, and a glove with an EN cut level of 4 may not be as cut resistant as a glove with an ANSI cut level of A4.

***WARNING:** Remember, no product is cut-proof.

ANSI 105

The ANSI 105 cut standard was updated in February of 2016. Cut resistance is measured by how many grams of pressure can be applied to a razor blade moving across a swatch of fabric until it cuts through. Previously, gloves were scored on a scale of 0-5. Under the new standard, gloves are scored on a scale of A1-A9.

NEW SCALE TO DETERMINE CUT SCORES

EN388

The EN388 uses a circular blade moving back and forth across a swatch of fabric under a fixed load of 500 grams. In other words, it simulates the number of repetitive cuts needed to cut through the fabric using a constant load. The results are then compared to the cut results of a cotton canvas. For example, a cut level of 5 means that the fabric is five times more cut resistant than the reference cotton.

EN 388 Cut Standards

PERFORMANCE LEVEL	AVERAGE CUT INDEX
0	<1.2
1	1.2
2	2.5
3	5.0
4	10.0
5	20

Don't Cut it Close - What Level of Cut Resistance is Right for You: <http://bit.ly/ZgKZkip>

CHOOSING THE RIGHT LEVEL OF CUT RESISTANCE

The new ANSI Cut standards enable you to make a more informed decision. The increased granularity within what used to be level 4 range will enable you to make distinctions that previously didn't exist. In general, you can use this guide in choosing your new ANSI cut level:

Light cut hazards (ANSI A1): Material handling, small parts assembly with sharp edges, packaging, warehouse, general purpose, forestry, construction

Light/medium cut hazards (ANSI A2-A3): Material handling, small parts assembly with sharp edges, packaging, warehouse, general purpose, forestry, construction, pulp & paper, automotive assembly

Medium cut hazards (ANSI A4): Appliance manufacturing, bottle and light glass handling, canning, drywalling, electrical carpet installation, HVAC, pulp and paper, automotive assembly, metal fabrication, metal handling, packaging, warehouse, aerospace industry, food prep/processing

Medium/heavy cut hazards (ANSI A5): Appliance manufacturing, bottle and light glass handling, canning, drywalling, electrical, carpet installation, HVAC, pulp and paper, automotive assembly, metal fabrication, metal handling, packaging, warehouse, aerospace industry, food prep/processing

High cut hazards (A6-A9): Metal stamping, metal recycling, pulp and paper (changing slitter blades), automotive assembly, metal fabrication, sharp metal stampings, glass manufacturing, window manufacturing, recycling plant/sorting, HVAC, food prep/processing, meat processing, aerospace industry

HOW IS CUT-RESISTANCE ACHIEVED?

The level of cut resistance provided is a combination of material composition and weight. Common cut resistant fibers include:

HPPE: High performance polyethylene fibers offer maximum strength with minimum weight. HPPE is 10 times stronger than steel by weight as well as 40% stronger than aramid fibers and offer a softer, cooler alternative.

Aramid: The most common brand name is Kevlar®. It is 5 times stronger than steel and provides great tensile strength. Due to its inherently flame resistant nature, it will not melt and offers heat protection up to 320°F based on product design.

Spectra: A polyethylene fiber that is 10 times stronger than steel per unit weight, offering high cut resistance even when wet. Its low lint and flexible nature make it ideal for use in food processing.

Blended Shells: The introduction of steel and glass to HPPE and aramid help to significantly increase levels of cut protection while helping maintain comfort and fit.

The gloves featured in this catalog are cut resistant, not cut proof. There is no such thing as a cut-proof glove. Use care when working with or around sharp objects.

ANSI CUT A6

NEW

**HVG710SNF | BARRACUDA® CUT FORCE™**

- Hi-vis green with black adds contrast for safety
- Microfoam Air for excellent wet and dry grip

**713KSSN | KEVLAR®/STEEL MICROFOAM AIR PALM**

- EN 407:2004 rating 2 for contact heat

LEVEL A1: RED ZONE

minimum cut protection

Use for maintenance, box handling, transportation, light assembly and light engineering. Do not use with sharp objects, knives or saws.

701CRNF | RED NYLON BLACK FOAM NITRILE PALM

- Good dry, wet and oil grip

701CRPB | RED NYLON BLACK PU PALM

- PU palm for grip and abrasion

701CRLB | RED POLY/COTTON BLACK CRINKLE LATEX PALM

- Textured finish enhances grip and durability

ZONE DEFENSE®

LEVEL A2: ORANGE ZONE

medium cut protection

Use for handling sharp objects, material handling, automotive and construction.

703CONF | ORANGE HPPE BLACK FOAM NITRILE PALM

- Good dry, wet and oil grip

703COPB | ORANGE HPPE BLACK PU PALM

- PU palm for grip and abrasion

Use our Zone Defense color-coded system of cut-resistant gloves to identify the right glove for the zone!

Match the color-coding to the appropriate cut resistance level needed in each of your facility's work zones. Our Zone Defense system offers shells and coatings to fit every need. Save money with just the right amount of protection.

LEVEL A3: GREEN ZONE

maximum cut protection

Use for handling very sharp objects, glass handling and metal assembly.

705CGNF | GREEN HPPE BLACK FOAM NITRILE

- Good dry, wet and oil grip

UTILITIES

FIND THE RIGHT PRODUCT FOR THE RIGHT JOB

Every day, welders face rough environments complete with heat, sparks and slag. Choosing the right glove is essential to not only minimizing safety risks but maximizing worker productivity and the quality of the weld. When selecting hand protection, consider the application and environment to equip welders with gloves designed uniquely for welding.

IRONCAT® welding gloves by West Chester Protective Gear are specifically designed for the unique heat shielding, dexterity and protection demands of stick, MIG and TIG welding.

STICK

MAXIMUM HEAT PROTECTION AND DURABILITY

Gloves for stick welding are designed with thicker materials to withstand higher heat. The longer length provides better forearm coverage, while welts protect finger seams against sparks and abrasion. Various materials (split cowhide, elk), linings (cotton, foam insulation) and thumb designs (wing, straight, reinforced strap) are available to suit worker preferences.

MIG

ENHANCED DEXTERITY AND COMFORT

MIG welding gloves allow for maximum dexterity with an unlined palm, while foam insulation on the back of the hand provides increased heat protection. Various lighter-weight materials are available including cowhide for durability, goatskin for increased dexterity, deerskin for unparalleled comfort, and pigskin, which stays pliable even with increased wear and exposure to moisture. Wing thumb designs for open-handed work are available, as are straight thumb designs for better grip. A reinforced thumb strap increases durability in high-wear areas.

TIG

EXTREME PRECISION AND DURABILITY

Constructed of lighter-weight materials, unlined TIG welding gloves allow for maximum dexterity. Goatskin is available for durability and comfort, while kidskin offers unmatched dexterity. For softer feel and comfort, a deerskin glove is available. Wing thumb designs for open-handed work are available, with a straight thumb design for optimal torch grip.

HEAT-PROTECTING TECHNOLOGY

CLIMAX™ AEROGEL

Exclusive from West Chester Protective Gear, we introduce new aerospace technology to provide maximum heat protection and comfort in welding gloves. Originally created for panel lining on space shuttles, Climax™ Aerogel is a high-temperature heat shield, formed of silica aerogel impregnated into a glass-fiber mat that does not burn or char. Yet it is hydrophobic, breathable, flexible and environmentally safe. Climax™ Aerogel is able to withstand temperatures reaching over 3,600°F (2000°C) and has been strategically placed in our premium gloves. Ironcat gloves with Climax™ Aerogel are state-of-the-art in heat protection and comfort.

NOMEX®

Nomex® fiber has endured a rigorous series of fire scenarios that simulate real-life situations, making it one of the most advanced thermal burn injury prevention fabrics in the world. Nomex® is the go-to fabric for manufacturers that make products for protecting firefighters, Air Force pilots and industrial workers. For welders, this is a breathable fabric with invaluable protection against flame.

SILICONE-COATED PALM KNIT

Our new Silicone-Coated Palm Knit TIG glove isn't your father's glove. It will be the most comfortable TIG welding glove that you'll ever wear. The cut and heat-resistant knit shell is dipped into flexible fire resistant silicone to give you the ultimate feel for the wire. Plus, you can wear it all day for all your jobs in the shop. You have to try it to believe it.

7030 | LEATHER SHOE PROTECTORS

- Heat resistant split cowhide w/ Kevlar® thread
- Adjustable buckles and snaps
- Double layer leather rivets at toe and ankle high

IRONTEX™ fabric is specially treated flame resistant cotton designed for lightweight and comfortable protection. The fabric will self-extinguish when exposed to flame and will not melt, shrink, or drip. IRONTEX™ conforms to ASTM D6413 flame retardant and washable test methods. Flame resistance lasts up to 100 home washings, and 50 commercial washings. 9 oz flame retardant cotton sateen provides economical protection against light spark and spatter.

WELDING APPAREL

IRONTEX® WEAR

7060 | **IRONTEX® HI-VIS ORANGE** M-5XL

CUTS OF LEATHER

Leather provides outstanding comfort, durability, abrasion and is cost-effective. It is also naturally heat resistant. Leather comes in a variety of types and grades, and these factors are what determine how durable, breathable, abrasion-resistant, moisture-resistant and supple/soft your gloves will be. West Chester Protective Gear is the largest leather work glove supplier in the Western hemisphere, and we have a broad selection of styles.

LEATHER TYPES

Grain: The smooth outside top layer of the hide.

Split: The rougher inside layer of the hide when top layer is removed.

LEATHER CATEGORIES

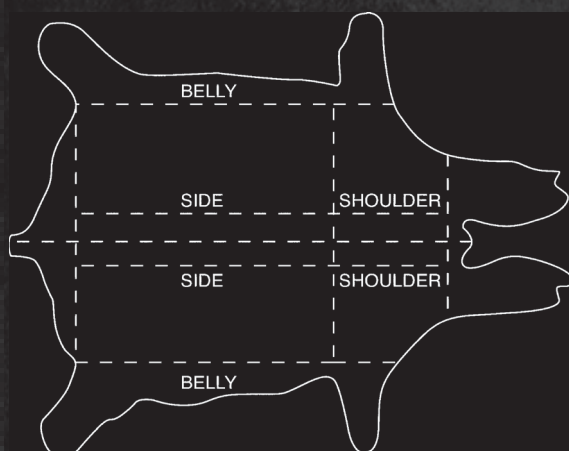

Premium: The highest quality and most durable leather available provide the most uniform leather with few imperfections. Most commonly cut from the side area or rib section of the hide.

Select: Leather of consistent quality and thickness with slightly less durability than premium. Typically cut from the shoulder area of the hide where texture differences are more visible.

Standard: Provides the best value leather for the price with adequate quality and durability. Generally cut from the shoulder area or belly of the hide.

Economy: The least expensive option with inconsistencies in leather appearance and texture. Most commonly cut from the belly section of the hide.

BENEFITS OF HIDE TYPES

Cowhide

- Good durability
- Good insulation protection, especially against heat
- High puncture resistance

Goatskin

- Natural lanolin creates soft feel
- High abrasion and puncture resistance
- High flexibility
- High durability
- Kidskin is lighter weight and more supple

Buffalo

- Very durable, easy to maintain
- More resistant to damage from ripping, stretching and heat damage
- More breathable than cow leather, better for a wider range of temperatures

Pigskin

- Lightweight
- Highest breathability due to porous texture
- Low cost
- High abrasion resistance
- Tends to become softer and more flexible after use

Deerskin

- Very soft and comfortable
- Highest insulation protection, especially against cold
- Highest durability and longest lasting
- Highest flexibility and dexterity

Elk

- Very durable, easy to maintain
- More resistant to damage from ripping, stretching and heat damage

ELK

Arc flash occurs when an electrical current jumps from the desired electrical path and travels through the air to another conductor. When this happens, anyone in the path of the discharge can be severely injured, or even die.

An arc flash rating represents the energy necessary to pass through any given fabric to cause, with a 50% probability, a second or third degree burn. It is measured in calories/cm².

The National Fire Protection Association (NFPA) has identified four Hazard Risk Categories (HRCs). The HRC is used to determine the arc rating of a garment worn during a given job task. Only your employer can tell you the required level of protection required for your job.

HAZARD RISK CATEGORY	REQUIRED MINIMUM ARC FLASH RATING
1	4 cal/cm ²
2	8 cal/cm ²
3	25 cal/cm ²
4	40 cal/cm ²

NEW
KS993KOA | **GOATSKIN DRIVER WITH CUT PROTECTION, AQUA ARMOR™, OIL ARMOR™ & ARC FLASH**

- Arc Flash HRC 4: ATPV 43 cal/cm²
- ANSI Cut A4
- Oil Armor™ technology resists oil and grease
- Aqua Armor™ technology resists water

THE R2 SERIES

Our R2 gloves are designed specifically for the Oil, Gas and Mining industries, to withstand the harshest conditions of the most demanding jobs. Loaded with features, our R2 gloves are also tested for impact resistance based on ASTM D2632. All R2 gloves exceed mining standards for impact.

WE'VE THOUGHT OF EVERYTHING

4-way stretch spandex on the back of hand to provide superior dexterity

Super flex TPR specifically designed to reduce hand fatigue, increase dexterity and maintain back of hand protection

Sonic welded fingertips to ensure the integrity of your gloves lasts throughout the entire job

Snug, neoprene cuffs ensure your gloves remain fitted on the job and all foreign objects are kept out of the glove

Identification tag protects your investment and makes your gloves easy to find on the jobsite

Expanded fourchettes for maximum comfort and dexterity

R2 EVOLUTION HEAVY DUTY

87030 | **R2 RIG CAT 5®**

Engineered to enhance grip in slick conditions, plus protect from cuts.

- Silicone palm repels liquids for enhanced grip and abrasion, even when completely submerged
- Honeycomb pattern channels liquids off the palm
- Silicone does not crack or stiffen in low temperatures
- Red palm for easy signaling
- Armortex® palm backing for ANSI A4 cut resistance
- Reinforced Kevlar® thumb saddle for durability

87020 | **R2 RIG CAT 2®**

Constructed with a cut-resistant palm, this glove is made for a multitude of purposes.

- Durable palm for heavy duty abrasion and maximum dexterity, while avoiding hand fatigue
- ANSI cut A3 protection
- Red palm for easy signaling
- Sonic welded TPR through fingertips to reduce pinch points
- Reinforced Kevlar® thumb saddle for durability

87010 | **R2 RIG ACE®**

Designed with grip enhancements for slick conditions.

- Silicone palm repels liquids for enhanced grip and abrasion, even when completely submerged
- Honeycomb pattern channels liquids off the palm
- Silicone does not crack or stiffen in low temperatures
- Red palm for easy signaling
- Backed with flexible synthetic leather for increased dexterity
- Reinforced Kevlar® thumb saddle for durability

87000 | **R2 RIG RUNNER®**

Designed to handle highly abrasive tasks while maintaining dexterity to remain productive throughout the task

- Synthetic leather base resists oils and liquids
- Dotted palm enhances grip
- Red palm for easy signaling
- Sonic welded TPR through fingertips to reduce pinch points

MATERIAL HANDLING

WESTCHESTER
PROTECTIVE GEAR®

COTTON AND COTTON-BLEND GLOVES

Cotton or cotton-blend gloves are traditional work gloves used in many industries due to their superior comfort and protection against dirt and grime.

CATEGORIES OF GLOVES INCLUDE:

String Knits: General purpose gloves that provide moderate protection from both heat and cold. Gauge references the number of rows of stitches per inch. A higher gauge means less bulk and greater dexterity.

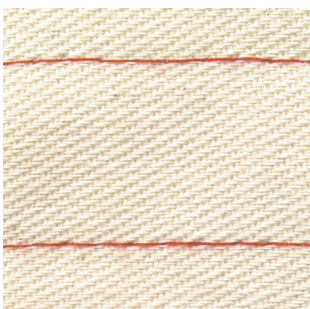

Dotted/Coated: Ideal for material handlers due to the enhanced grip, added protection and extended wear provided by the dots or palm coating.

Terry: Provides moderate thermal protection and cut resistance.

Jersey: A comfortable alternative that comes in a variety of weights for general duty and light abrasion application.

Chore: The cotton shell provides the protection needed for general purpose or light duty jobs. Lining offers comfort and heat dispersion.

Hotmill: These general layered gloves offer greater protection for extended exposure to moderate heat.

Nap In

Nap Out

NAP IN AND NAP OUT

Napping is the pulling up of fibers from the base weave, which results in a raised, fuzzy surface. This surface faces inward on nap in gloves and outward on nap out gloves. Nap in fabric provides greater abrasion resistance and outwears nap out fabric. Nap out fabric provides greater heat protection.

STRING KNITS DOTTED AND PATTERNED

GENERAL PURPOSE

712SKBSGT | **HEAVYWEIGHT DOTTED GRIP WITH STRIPED THUMB**

- Heavyweight acrylic/polyester knit
- Crisscross grip pattern on both sides
- Elastic wrist

708SKH | **YELLOW CRISSCROSS GRIP**

- Medium weight acrylic/polyester knit
- Honeycomb grip pattern on both sides
- Elastic wrist

K708SKHW | **BLACK HONEYCOMB GRIP**

- Medium weight cotton/polyester knit
- Honeycomb grip pattern on both sides
- Elastic wrist

K708SKBSW/K708SKBSWL | **DOTTED BOTH SIDES**

- Medium weight bleach white knit
- Dots on both sides
- Elastic wrist

K708SKW /K708SKWL | **DOTTED SINGLE SIDE**

- Medium weight bleach white knit
- Dots on one side
- Elastic wrist

B710SBS/B710BSL | **BLUE BLOCK PATTERN**

- Medium weight cotton/polyester knit
- Block pattern on both sides
- Elastic wrist

CHEMICAL RESISTANT GLOVES

AUTOMOTIVE
OIL/GAS
CONSTRUCTION
POWER TOOL

Different glove materials resist different chemicals at varied exposure levels. Therefore, care must be taken in choosing the right glove for the given application. Thickness and length also play a role in determining the appropriate glove. Thicker gauge gloves are heavier and provide increased chemical resistance than thinner gloves. The length of glove needed can be determined by assessing the splash and immersion protection needed.

The most common materials include:

PVC: Chemically resistant to oil, grease, acids and solvents while providing good abrasion resistance. A jersey or interlock lining enhances comfort.

Nitrile: Provides excellent abrasion, cut and snag resistance when encountering oils, greases and petroleum products. Choose smooth finish for dry grip or rough finish for wet and oily conditions.

Neoprene: Protection from chemicals, oils, acids, solvents, and caustics.

Latex: Good sensitivity and dexterity, making it ideal for food processing, electronics assembly and similar applications.

Vinyl: Provides moderate abrasion resistance and can have a textured finish that enhances grip. Choose a soft jersey lining for cushioning.

SUPPORTED VS. UNSUPPORTED

Supported gloves incorporate a base fabric on which the chemical protective material is adhered. Base fabrics include jersey, which is soft and helps to absorb perspiration, as well as a thinner interlock fabric that helps give the glove added strength for resistance to cuts, snags, abrasions and punctures.

Unsupported gloves provide enhanced dexterity and are either lined or unlined. Some unsupported lined gloves have a thin “flock” lining embedded on the interior of the glove to help absorb perspiration, add comfort and aid in putting on and taking off the gloves.

PERMEATION AND DEGRADATION

Permeation and degradation are two ways of measuring the protective capabilities of a material.

Permeation – This is the process whereby a chemical passes through the protective film of a glove without going through the pores or other visible openings. The chemical molecules move between the molecules of the material and make their way to the other side of the film. Breakthrough is calculated in minutes and represents the time it takes for the chemical to first be detected on the other side of the film. Rate is a measurement of the highest flow rate for the permeating chemical during the course of a six-hour test.

Degradation – This is the reduction of one or more physical properties of a glove due to contact with a chemical. Certain glove materials may become hard, or brittle, or they may become softer, weaker and swell to several times their original size. If significant degradation occurs, a glove's permeation resistance is quickly impaired, but degradation and permeation do not always correlate.

TESTING STANDARDS

- **ASTM F739-12C1:** Standard test method for permeation of liquids and gases through protective clothing materials under conditions of continuous contact
- **ASTM F1383:** Standard test method for permeation of liquids and gases through protective clothing materials under conditions of intermittent contact
- **EN374:** European standard protective gloves against chemicals and micro-organisms

GLOVE LENGTH

TYPICAL GLOVE LENGTHS AND AREAS OF PROTECTION	
Glove Length	Area of Protection
12"	Hand and wrist
14"	Up to mid forearm
18"	Up to elbow

Guide to Chemical Resistance

The above chart is a general guide to chemical resistance of West Chester brand products. Note that this guide in no way warrants the performance of any glove, but is intended solely to provide resistance characteristics of various glove materials to given chemical agents. In every case, resistance can be affected by factors such as ambient or solution temperature, chemical concentration, length of time in direct contact with chemicals, material thickness of glove and other factors. Preliminary testing of glove suitability should always precede use.

PROTECTIVE GEAR®

DISPOSABLE GLOVES

Disposable gloves provide barrier protection for a variety of applications. Different materials are available to choose the appropriate protection for the environment.

LATEX

Natural rubber latex is a highly durable and flexible material that provides a high measure of barrier protection against pathogens and environmental contaminants. Natural rubber latex provides good resistance to numerous acids and ketones. It is the most elastic of the disposable glove materials.

Latex gloves are used in the healthcare, maintenance, janitorial, food processing, food services, and assembly industries.

Latex resists bases, acids, alcohols and diluted solutions of many chemicals. Due to the natural proteins found in rubber, some individuals experience latex sensitivity. In these cases, nitrile or vinyl may be a good alternative.

NITRILE

Nitrile is a synthetic rubber also known as NBR (Nitrile Butadiene Rubber). Nitrile gloves are known for their strength, durability and elasticity. This form of synthetic rubber is resistant to oil, fuel and some chemicals. Nitrile gloves can be used as an alternative for people who have latex allergies.

A synthetic rubber compound, nitrile also protects against bases, oils, and many solvents as well as fats and greases. Nitrile can also provide excellent resistance to mild snags, punctures and cuts. Nitrile gloves are used in the healthcare, automotive, food processing, food services and assembly industries.

VINYL

Vinyl is a synthetic, man-made material. It is resistant to moisture and humidity but is not as form-fitting as latex or nitrile. Vinyl is known for its strength, durability and value. Vinyl gloves can be used as an alternative for people who have latex allergies.

Vinyl provides protection against many acids, bases, and alcohols. It is not recommended for many types of solvents.

POLYETHYLENE

This is a lightweight and flexible synthetic resin glove that is extremely affordable. It is a single use glove traditionally used in food service.

Polyethylene offers barrier against oils and fats and is most commonly used as an economical level of protection in the food industry.

HOW TO CHOOSE DISPOSABLE CLOTHING

Choosing the right disposable clothing depends on what level of protection you need. Here are some guidelines for choosing the right products:

What are you trying to keep off?

Dry particulates, light spray, liquid splash, or chemicals.

What is the size of the particulate/liquid?

Bigger or smaller than a grain of sand.

If it is chemical, what is the chemical?

Diluted solution or hazardous chemical.

What are the work conditions and exposure time?

Consider temperature and length of exposure to work hazards when selecting a suit.

What size do you need?

Select one size larger than actual size.

FINDING THE RIGHT PROTECTION

Product	Dry Particulate	Liquid Spray & Light Splash	Chemical Barrier	Flame Resistant

Apron

TYPES OF SEAMS

- **Serged Seam:** Interlocking stitch where the two ends of the fabric meet, producing a hardy & durable garment
- **Bound Seam:** Reinforced serged seam with an additional piece of like material sewn on top, resulting in increased particulate holdout and strength
- **Taped Seam:** Used in chemical barrier applications, seam is sewn then tape-applied and melted together by heat sealing

POSIWEAR®

FLAME RESISTANT

3100

Our Posiwear® Flame Resistant suit is made from Provia® material, which is a breathable fabric with flame retardant, repellent and anti-static finishes.

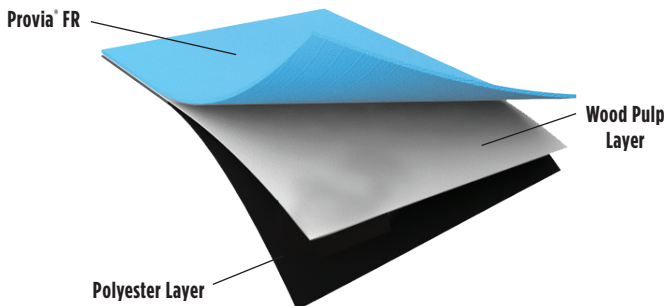

Features and Benefits

- Self-extinguishes when sparks are present
- Protects worker's underlying suit and reduces body burn injury
- Good particulate and liquid splash protection
- NFPA 701 / NFPA 99 Anti-static
- Wicks moisture from the body
- Repellent to oil, water and alcohol
- Zipper passes flame test to meet CFR710
- Serged seams

Material Composition

Provia® is made of a unique cellulose/polyester material. It does not melt, instead it ashes when burned. It is also self-extinguishing. It is extremely soft, durable and breathable.

Posiwear® Flame Resistant Typical Properties

Physical Property	Test Methods	Units	Posiwear® FR
Weight	ASTM D3776	osy	2.39
MD Tensile (Grab)	ASTM D5034	lb/in	271
CD Tensile (Grab)	ASTM D5034	lb/in	16.1
MD Tear Strength (Trapezoid)	ASTM D5733	lb/in	7.3
CD Tear Strength (Trapezoid)	ASTM D5733	lb/in	12
Hydrostatic Head	AATCC127	cm	25+
Oil Repellency	AATCC118	holdout rating	5
Static Decay	IST 40.2-95	sec	0.01
Vertical Flame	NFPA 701	% wt loss	20

Applications

Worn over the top of primary flame retardant clothing (FRCs) to protect from dirt and oil

- Chemical / Petrochemical industry / Refinery during turnaround periods / Maintenance
- Industrial Maintenance
- Utilities
- Transport

POSIWEAR®

ULTIMATE BARRIER

3678B

3709

Our Posiwear® Ultimate Barrier suits are made from PolySafe® material, which provides the highest level of barrier protection against chemicals, dry particulates, light sprays and liquid splash.

Features and Benefits

- Protects against chemicals, dry particulates, light sprays and liquid splash
- ASTM 1670 and 1671 for viral and blood-borne pathogens
- ASTM F739 and F903 for many chemicals
- Low lint - NFPA 99 Anti-static
- Available in white & yellow
- Bound or serged seams

POSIWEAR® ULTIMATE BARRIER CONTINUED

Material Composition

The Polysafe® material in our white suits is made of a strong two-layer composite fabric of resistant and durable polypropylene fabric and PE film. At 58 gsm, they are softer and more drapable.

The Polysafe® material in our yellow suits are made of a strong, three-layer extrusion-coated fabric of resistant and durable polypropylene fabric and PE film. At 82 gsm, they are heavier and stronger.

Applications

- Chemical / Petrochemical industry
- Cleaning and industrial maintenance
- Hazardous material transport
- Industrial painting
- Emergency services
- Pharmaceutical industry
- Oil handling
- Waste management / Remediation

POSIWEAR®

BREATHABLE ADVANTAGE

3600

Our Posiwear® Breathable Advantage is made from PolyBreathe® Light Material, which provides the optimum balance between protection and comfort.

Features and Benefits

- Protects against small dry particulates, light spray and liquid splash
- Breathable material
- ASTM 1670 for blood-borne pathogens
- NFPA 99 Anti-static
- Low lint

**WATER
RESISTANT**

POSIWEAR® BREATHABLE ADVANTAGE CONTINUED

Material Composition

PolyBreathe® Light Material is a two-layer composite of microporous PE film (MPPE) adhesive bonded to SBPP. It has pores large enough for water vapor (sweat) to pass through, yet small enough to keep out water droplets. It is a breathable and cool material.

Applications

- Petrochemical industry / Refinery
- Cleaning and industrial maintenance
- Automotive refinishing
- Pharmaceutical industry
- Construction
- Asbestos removal
- Waste disposal
- Manufacturing

POSIWEAR®

M3

C3802

C3906

Our Posiwear® M3 suit is made from Pentamax® material, which consists of five layers of polypropylene including three layers of meltblown for enhanced protection.

Features and Benefits

- High level of breathability
- Five layers provides a higher barrier against dry particulate and light liquid spray than standard SMS materials
- NFPA 99 Antistatic

Product Line

C3800

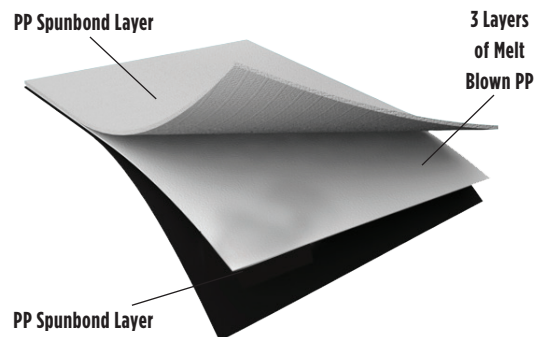

Material Composition

Pentamax® consists of five layers of polypropylene for enhanced personal protection. There are two layers of spunbond polypropylene for strength and durability, sandwiching three layers of melt blown for higher barrier. The small fiber size and pore size makes this the perfect choice for protection against dry particulates and liquid sprays.

Applications

- Construction
- Industrial maintenance
- Waste disposal
- Food processing
- Heavy dust environments
- Manufacturing

FIND THE RIGHT GLOVE FOR THE RIGHT CONDITION

West Chester Protective Gear offers a wide variety of insulated gloves. From the light insulation of brushed knit to the heavy insulation of 120 gram Positherm®, there is a glove to fit your job application in most environments. Be sure to choose the right level of insulation for your job. Too much insulation can make your hands sweat and if you're very active you will stay warmer than if you're inactive. Here is a chart to use as a guide:

ENVIROMENTS	ACTIVE LEVELS
Very Cold	Light activity levels where the wearer generates little body heat through activity. 120g Positherm® Lining
Cold	High activity levels where the wearer generates a lot of body heat through activity. Pile Lining Thermal Lining Brushed Terry 100g Positherm® Lining
Cool	When light warmth is needed. Brushed Knit Red Fleece Lining Fleece Lining

HOW IT WORKS POSITHERM® INSULATION

West Chester Protective Gear® Positherm® insulation is warm and durable, yet also lightweight and flexible. Made of polyester fibers, Positherm® creates air pockets that trap and hold heat, reducing heat flow away from the body while repelling cold from the outside. Positherm® is bonded to a tricot or fleece fabric that wicks away moisture, keeping hands dry and comfortable. Positherm® is a resilient insulation that keeps you warm in cold conditions.

WICKS AWAY MOISTURE

REPELS COLD FROM THE OUTSIDE

INSULATED COATED GLOVES

710TSNF | **INSULATED FOAM NITRILE
FULL DIP**

- Insulation offers superior warmth and comfort
- Super soft nitrile feels like leather
- Hook and loop wrist keeps out the cold
- Excellent protection against oil-based chemicals
- Acrylic brushed terry loop liner

715WNFTF | **INSULATED MICROFOAM
AIR WITH TOUCHSCREEN**

- Touchscreen material is embedded in the coating, allowing for use on all fingers
- Better grip in both wet and oily conditions
- Acrylic brushed terry loop liner
- EN511: X2X

715TSSL | **INSULATED
SANDY LATEX FULL DIP**

- Dual-layer thermal lining keeps hands warm
- Hi-vis yellow adds visibility for enhanced safety
- Repels water & stays flexible in cold conditions
- Acrylic brushed terry loop liner

713TSNF | **THERMAL FOAM
NITRILE ¾ DIP**

- Dual layer for added warmth
- Stays flexible in cold temperatures
- Excellent protection against abrasion
- Acrylic brushed terry loop liner

715WHPTF | **INSULATED
BI-POLYMER ¾ DIP**

- Repels water & stays flexible in cold conditions
- Dual-layer thermal lining keeps hands warm
- Pre-curved shape for excellent dexterity
- Acrylic brushed terry loop liner

32L710 | **INSULATED HI-VIS
CRINKLE LATEX PALM DIP**

- Dual-layer thermal lining keeps hands warm
- Hi-vis yellow adds visibility for enhanced safety
- Repels water and stays flexible in cold conditions
- Heavy acrylic brushed terry loop liner

PRODUCT MERCHANDISING

VENDABLES

If you use vending machines to help control inventory and manage access to your gloves, we have the capability to package your goods in various quantities to your specifications for vending machines. We can configure any of our products to satisfy your needs.

TAGGING:

We can attach a retail hang-tag to virtually any style of glove or garment. In addition to West Chester-branded tags, we can design, print and attach custom tags. A UPC code is included on every tag, and special customer item numbers are no problem.

PROMO PACKS

We can help with “promo packaging” to stimulate customer interest. We can package gloves in packs of 2, 3 or almost any other multiple and band them with a single hang-tag. These banded gloves can be used for a POP display, dump bin or end cap display to drive sales.

DISPLAYS:

West Chester helps you get the most out of promotional work gloves. If you want to display your apparel in a retail setting, West Chester Protective Gear has extensive experience in the retail market. We have displays available that can be tailored to meet your specific needs.

PRODUCT DESIGN

PRIVATE LABELING:

West Chester is a leading provider of private label gloves and apparel, supporting more than 65 private customer brands. If you want to maintain your own brand on your products, we can help you design back-of-hand-art, tags, labels and provide the support you need.

LOGOING:

Logoing your gloves and apparel can help you protect your investment. Or, you could enhance the safety of your employees by adding a warning (“Watch Your Hands”) or other slogan to your work gloves. West Chester will help you personalize your gloves in the way that best suits your needs.

CUSTOM DESIGN PRODUCTS:

If you need a glove that we don’t have, ask and we will work with you to develop a new style to meet your needs. We have a full staff of product designers, safety experts and graphic designers who will develop a product to perfectly fit your job at hand.

SHIPPING SERVICES

DIRECT IMPORT:

To help companies manage their inventory costs, West Chester offers innovative direct import programs. Our hybrid program can help you manage stock outs by supplementing direct import with storing inventory on our warehouse floor. This is ideal for high-volume distributors looking for a great value without compromising quality.

DROP SHIPMENTS:

Cut down on shipping time by using our drop shipment service. Save time and money with the confidence that we will handle your orders with utmost integrity.

West Chester Protective Gear provides a wide variety of products, for many uses. Please use the specific product for the recommended uses. Products that provide cut protection, or that are tested to different cut protection levels are not to be used to provide protection against powered blades, or other sharp rotating equipment. Products that provide protection against, or are insulated to protect against injury from heat, sparks, or open flame are not to be considered fire-proof. Products that are provided for use when handling chemicals do not eliminate or completely prevent injury or harm due to exposure to chemicals. It is the responsibility of the user to test product prior to use to ensure the product will meet your exact applications.

Our vision is to **"create value"**
for our customers, employees,
vendors and shareholders
by profitably growing our company.

*We are driven to be better
tomorrow than we are today.*
